5020 EXTENDED POT LIFE ASPARTIC

HIGH-BUILD POLYASPARTIC WITH LONGER WORKING TIMES

The 5020 Extended Pot Life Aspartic is a two-component, high-build polyaspartic with over 80% solids. Its extended pot life offers a longer working time in humid environments, allowing moisture to evaporate fully during curing. For the best results, apply the coating when humidity is low and during the coolest part of the day to prevent condensation and achieve a clearer finish.

With its faster dry time, the 5020 XT allows for a quick return to service, enabling floors to be walked on in 10 hours and driven on in 72 hours.

As part of our Performance product line, the 5020 XT delivers high-quality results at an affordable price. It provides a beautiful, high-build topcoat with a long-lasting high-gloss finish for residential, commercial, and industrial concrete.

THE VERSATILE DIFFERENCE

- High-Build
- Extended Pot Life of 45 Min +/-
- Longer Working Time
- Low Odor
- High Gloss
- Resistance to Most Chemicals
